

## Will your plant be protected in a fire?

Power plants demand fire protection solutions that consistently function at optimal performance. Finding out that a system is faulty in the midst of a fire is too late. Protecting your most valuable assets begins with the regular inspection, testing and maintenance of fire protection systems.

F.E. Moran Plant Services offers power plants comprehensive solutions designed to ensure that fire protection systems are operating to their fullest potential when you need them the most.

### **Would you prefer to prevent fire protection system issues rather than react to them?**

The best time to solve a problem is before it starts. F.E. Moran's personnel utilize their unparalleled experience and cutting-edge technology to expose and resolve problems before people and property are put at risk.

### **Do you have an array of fire protection systems that require attention?**

With in-depth knowledge of all varieties of suppression, sprinkler and fire alarm systems, F.E. Moran's certified technicians have the flexibility to fully service all types of applications.

### **Could you better utilize the time spent inspecting and testing complex fire alarm systems?**

Thorough inspection and testing helps keep fire alarm systems operational, significantly reduces false alarms and ensures compliance with relevant code requirements. F.E. Moran's specialized service team is intimately familiar with the intricacies of all types of complex systems, alleviating the encumbrance of inspecting and testing everything yourself.

*Regular inspection, testing and maintenance of fire protection systems helps eliminate issues that could result in the loss of life and property.*

### **Who is going to help when you have a problem at 2am?**

Problems often arise outside of normal business hours. F.E. Moran's support center is available 24 hours a day, seven days a week to provide power plants with the expertise needed to keep systems functional.

### **Can you benefit from the long-term returns of in-house maintenance?**

The most knowledgeable personnel in the industry can teach your plant staff how to inspect, maintain and resolve system issues, thereby reducing the use of external service providers.

### **Are you confident that you are meeting company and industry requirements?**

Inspection and testing provide the peace of mind that requirements are met. F.E. Moran can provide detailed documentation accepted by industry authorities to demonstrate compliance and keep this information readily accessible for your plant.

**Call today for a free fire protection system review with a certified expert.**
